

SikaScreed®-20 EBB

Epoxy bonding agent

Product Description	SikaScreed®-20 EBB is a moisture tolerant, structural, two part bonding agent, based on a combination of epoxy resins and special fillers.			
Uses	As a structural bonding agent and adhesive for SikaScreed® HardTop product range and for hardened concrete: As a structural bonding agent and adhesive for			
	 Concrete elements (including bonding fresh to hardened concrete) 			
	Hard natural stone			
	Ceramics, fibre-cement			
	Mortar, Bricks, Masonry			
	Steel, Iron, Aluminium			
	Wood			
	 Polyester / fibreglass and Epoxy resin materials 			
	Glass			
Characteristics /	Easy to mix and apply			
Advantages	 Suitable for dry and damp concrete surfaces 			
	Very good adhesion to most construction materials			
	■ High Bond Strength			
	Hardens without shrinkage			
	■ High initial and ultimate mechanical strength			

		-
Tested according to EN 1504-4		
Part A: Part B: Parts A+B mixed:	white dark grey concrete grey	
5 kg (A+B) and 15 l	kg (A+B)	
24 months from date of production if stored properly in original unopened, sealed and undamaged packaging, in dry conditions at temperatures between +5°C and +30°C. Protect from direct sunshine.		
Epoxy resin		
1.4 <u>+</u> 0.1 kg/l at +23	3°C	
On vertical surfaces	s it is non-sag up to ~ 1 mm thickr	ess.
~ 1 mm max.		
Coefficient W: 8.2 x 10 ⁻⁵ per °C (Te	emp. range +23°C - +60°C)	(According to EN 1770)
		(According to ISO 75) (thickness 10 mm)

3 days	+23°C	Steel	11 - 15 N/mm²
3 days	+30°C	Steel	13 - 17 N/mm²

^{*100%} concrete failure.

E-Modulus

Tensile:

~ 4'000 N/mm² (14 days at +23°C)

(According to ISO 527)

Compressive:

~ 3'250 N/mm² (14 days at +23°C)

(According to ASTM D695-95)

Elongation at Break

1.0 <u>+</u> 0.1% (24 days at +23°C)

(According to ISO 527)

System
Information

Information		
Application Details		
Consumption / Dosage	Sika [®] Screed-20 EBB: For substrate roughness until 1.0mm and normal absorbency ca. 0.6-1.0 kg/m². For higher substrate roughness and/or stronger absorbency the consumption has to be located with a test area on side.	
Substrate Quality	Hardened mortar and concrete must be older than 28 days (depending on any minimal strength requirements). Verify the substrate strength by testing (concrete, masonry, natural stone). The substrate surface (all types) must be clean, dry or mat damp (no standing water) and free from contaminants such as dirt, oil, grease, existing surface treatments and coatings etc. Steel substrates must be de-rusted to a condition similar to SA 2.5.	
	The substrate must be sound and all loose or friable particles must be removed.	
Substrate Preparation	Concrete, mortar, stone and brick substrates.: Concrete and other hardened mineral substrates must be prepared by suitable means such as high pressure water jetting and / or blast cleaning, in order to obtain surfaces that are sound, clean, dry or mat damp (no standing water) and free from any cement laitance, ice, grease, oils, old coatings or other surface treatments. Any loose or friable particles must also be removed to achieve a contaminant free and open textured surface.	
	Steel substrates: Steel surfaces must be cleaned and prepared thoroughly to the acceptable quality standard equivalent to Sa 2.5 i.e. normally by blast cleaning and then removing any dust by vacuum. Avoid dew point conditions.	
Application Conditions / Limitations		
Substrate Temperature	+10°C min. / +30°C max.	
Ambient Temperature	+10°C min. / +30°C max.	
Material Temperature	SikaScreed®-20 EBB must be applied at temperatures between +10°C and +30°C	
Substrate Moisture Content	Substrate must be dry or mat damp (no standing water) Brush the material well into the substrate	
Dew Point	Beware of condensation and dew point conditions! Substrate temperature during application must be at least 3°C above dew point.	
Application Instructions		
Mixing	Part A: part B = 2:1 by weight or volume	
Mixing Time	Pre batched units: Mix parts A+B together for at least 3 minutes with a mixing spindle attached to a slow speed electric drill (max. 300 rpm) until the material becomes smooth in consistency and a uniform grey colour. Avoid aeration while mixing. Then, pour the whole mix into a clean container and stir again for approx. 1 more minute at low speed to keep air entrapment at a minimum. Mix only that quantity which can be used within its pot life.	
Application Method / Tools	Apply the mixed SikaScreed®-20 EBB to the prepared surface by brush, roller, spray or with a trowel, and ensure uniform and complete coverage. On hardened concrete substrates mechanically prepared to receive fresh concrete, always apply by brush and work the material well into the substrate.	
	Place the fresh concrete whilst the SikaScreed®-20 EBB layer is still 'tacky'. If the material becomes glossy and loses tackiness, apply a fresh coat with additional SikaScreed®-20 EBB and proceed.	

	5	

			۵	
Cleaning of Tools	Clean all tools and application equipment with Sika® Colma Cleaner immediately after use. Hardened / cured material can only be mechanically removed.			
Pot-life	(Pot life According to EN ISO 951			
	Temperature	+10°C	+20°C	+30°C
	Pot life (200 g)	~ 145 minutes	~ 55 minutes	~ 35 minutes
	The pot-life begins when the resin and hardener are mixed. It is shorter at high temperatures and longer at low temperatures. The greater the quantity mixed, the shorter the pot-life. To obtain longer workability at high temperatures, the mixed SikaScreed®-20 EBB may be divided into portions. Another method is to chill parts A+B before mixing them (not below +5°C).			
Waiting time / Overcoating	Maximum waiting tim	ne for wet-in-wet appli	cation on SikaScreed	l®-20 EBB
Overcoating	+10°C 3h			
	+20°C 1			
Notes on Application /	+30°C 30min	D := f=		
Limitations	SikaScreed®-20 EBB is formulated to have low creep under permanent loading. However due to the creep behaviour of all polymer materials under load, the long term structural design load must account for creep. Generally the long term structural design load must be lower than 20-25% of the failure load. Please consult a structural engineer for load calculations for your specific application.
